

HOOK LIFT BODY

OPTICONT™ WOOD CHIPS CONTAINER

Every haulage job is different. That's why CMT have produced three powerful options for hauling wood chips and lightweight materials more profitably.

OPTICONT MAX

45 m³ 1 980 kg. With the new lightweight range of load swap bodies – Opticont MAX – we have simply turned the design inside out, thus achieving a guaranteed load volume of 45 m³ with a tare weight of less than two tonnes. Maximized volume and minimized fuel consumption!

OPTICONT LIGHT AND ALLROUND, FOR DIFFERENT CHALLENGES

For haulage jobs where the focus is on weight, Opticont Light is unbeatable with its tare weight of 1 740 kg. Nothing can better this when it comes to maximizing the payload. For heavier haulage jobs, Opticont All-round is the clear choice. This model is used today for wood chips and scrap. With its tare weight of 2 250 kg, this unit is the perfect all-round body.
