

HOKKLIFT BODY

ASPHALT BODY - CASSETTE

The CMT asphalt body is also available in a cassette version, in which the vehicle body fits completely into the trailer body, forming a visually attractive and compact unit.

TWO VERSIONS OF THE CASSETTE FUNCTION ARE AVAILABLE:

With a high-tipping hydraulic tailgate which raises the tarpaulin frame at the same time. If the vehicle already has a hydraulic system, this version offers very fast and smooth handling with minimal manual operations.

-With rear door which swings all the way back and removable rear panel. This is a fully manual configuration with therefore works with maximum versatility regardless of vehicle. The lower part of the door is made of aluminum for easier handling. The rear of the tarpaulin lifts away easily by hand.

The overall height of this concept is minimized, because the smaller body fits completely inside the larger body. For the smaller body to fit it must be at least 500 mm shorter than the larger one.
